

KLR 250 Expedition Rack Installation Instructions **PN# 1510-0172**

Remove original rack if installed. The fender bag can be removed if desired. It will fit under the rack but will be very difficult to use. The frame loop over the rear fender will remain in place. Remove upper side panel mount bolts. Remove rear turn indicators.

Position rack over rear fender. Using bolts and washers and spacers provided, install at the original side cover mount position. Do not tighten at this time.

Install the rear turn indicator in tabs on the rear of the rack, use hardware provided at original turn indicator mount location. Reconnect wires. Some may require extensions.

Tighten all hardware.

If you elect to remove the fender bag, we have provided a cover plate that can be installed.

Re tighten all hardware after 100 miles.

Use your own judgment when loading your motorcycle.

Limits may depend on rider experience, speed, terrain to be covered and weather conditions.
